

Never lose or misplace a document again!

Our Pinnacle Knowledge Management System is the Solution!

If your tired of searching for documents misplaced or misfiled and would like the security of knowing you can leave your office with your filing cabinets in your back pocket, than Pinnacle is your answer.

Why Pinnacle?

One of the biggest challenges faced by modern day document management systems is the ease of use accessing documents in the repository. Pinnacle KMS has a easy to navigate web-based (Internet Explorer or FireFox) user interface, a Pinnacle Explorer or even Windows Explorer while maintaining version history, audit trail and metadata.

Tight Office Integration

Pinnacle KMS provides tight integration with the Windows desktop and Office Applications, allowing Windows and Office users access to the document repository from their desktop and Office applications. Users can drag and drop documents from their desktops and open and check in documents from within Microsoft Word, Excel, PowerPoint, and Outlook.

Pinnacle KMS goes beyond the WEBDAV interfaces provided by other vendors by allowing Windows desktop and Office users the ability to manage metadata, versions and workflow right from their desktop.

Lower cost, higher value

Pinnacle KMS costs far less to implement than expensive proprietary competitors and provides a cleaner document management implementation and stronger value proposition combined with the vFiler Automated Filing Application.

Low Overhead

Pinnacle KMS runs on the well known LAMP (Linux, Apache, MySQL, PHP) stack and may be installed using our powerful single click installers.

Since the Pinnacle KMS LAMP stack is far thinner than other proprietary systems by the competitors, infrastructure hardware requirements are far lower, thus further reducing your initial capital expenditure.

You will not find a more robust, feature rich document management system for the price.

Key Features

- Share, control, protect documents
- Accessible via Web Interface, Windows Desktop, Office applications and WEBDAV clients including MAC OS X Finder, Nautilus & Konquerer
- Scan directly into repository and OCR documents
- Full-text indexing allowing searching within document contents
- Powerful Workflow and Notification engine
- Sophisticated document metadata management and versioning
- Complete Document Audit Trail
- Powerful security group and role based security model
- Windows Server Active Directory Integration and LDAP servers
- Drag and drop access to documents from Windows desktop and Office applications
- Persist Microsoft Outlook email messages and attachments directly to the repository
- International language support
